# SDFC- Iteration 18

SDFC- Iter 18 Retro

| What went well | Votes |
|---|---|
| Overall the team did well to stay on focus and deliver the package on 4/4. The contingency factor for downtime was close to actuals | 20 |
| Inspite of external interface hurdles team is able to deliver the package intime<br>Team is able to complete all the user story which is plann | 19 |

| What didnt go well | Votes |
|---|---|
| We were getting error with Flight initialization. This also hampered our work. Although we found alternate way of working - Needs Follow up with CS | 9 |
| Integration testing got impacted due to timeout issues. | 1 |

| Action items | Votes |
|---|---|
| External Environment inconsistency continued<br>Waj: This is a major concern. The list of recent inconsistencies in the external environment need to listed and setup a program level meeting to discuss each. | 18 |
| Integration testing might have helped to come to know problem well before it is raised as defect.<br>-Waj: We will plan for these during our iteration planning. | 15 |
| We faced issue with Multisegment payment. Still this is know issue. it takes time more than what is expected.<br>Waj:- Needs Follow up with CS | 15 |
| If there is any update in API from external system, it should be informed before and documented. | 12 |
| Spike user story end up in coding and delivery<br>---------------<br>PVC spike story too over 3 times more actual's than the estimated time.<br>---------------<br>PVC userstory has lot of dependency on the common services .Since external dependent resources were not ready when the userstory started<br><br>WAJ: Need to improve our estimation. | 10 |
| We need to get ETA for the open issue with external systems. | 9 |

| | |
|---|---|
| Some one need to check whether all services were working fine at US time. its kind of Sanity testing which will help offshore team to continue working on next day<br>Waj: Will look into implementing this. | 6 |
